

# LOW POLY MANSION INTERIORS

## Readme

Welcome, and thank you for purchasing the *Low poly mansion interiors pack*! This is a modular pack with lots of rooms, furniture and props to easily use in your own scenes.

### Demo scenes and prefabs

There are several demo scenes with example rooms and lighting to help you get ideas and as a quick start. The room prefabs contain complete rooms filled with furniture and props, to easily get you started.

The rooms show different lights, e.g. the dining room is shown with sunny day lighting, and the study and drawing room show a night scene with artificial light sources.

We've included a low poly fire particle system for the hearths, one with point lighting as demonstrated in the drawing room, and one with area lighting as demonstrated in the attic.

### Other low poly packs

We also sell a low poly house interior pack already on the Unity asset store, and we're working on two other packs with more house and shop interiors. If you have any requests for future assets, just let us know!
